# PRODUCT DATA SHEET Tricoflex<sup>®</sup> Profile

Waterbar / Sealing profile for the Tricoflex<sup>®</sup> membrane joint sealing system

### DESCRIPTION

Thermoplastic elastomer based, preformed sealing profiles / Waterbars, for bonding to and / or casting in, to in-site and precast concrete elements, to seal joints and connections.

## USES

Waterbar / Sealing profile for watertight sealing of:

- Expansion and construction joints in both in-site and precast concrete constructions
- Connection joints for new to existing structures
- To repair and seal existing / leaking joints
- Use in watertight concrete and White Boxes
- Perfect Combination with the SikaProof Fully bonded Membrane System

## **CHARACTERISTICS / ADVANTAGES**

- Durable and rigid bond with the Sikadur<sup>®</sup>-31 CF Normal
- Highly flexible material
- Homogeneous weldability
- Excellent bond without primers
- Profiles available in different sizes and geometries

## PRODUCT INFORMATION

#### Composition Thermoplastic elastomer Packaging Width Profile Length of Roll / Bar DFT 330/3 330 mm Roll of 25 m DFT 330/3 KF 330 mm Roll of 25 m DFT 330/3 KI 330 mm (angled) Roll of 25 m DFT 330/3 KA 330 mm (angled) Roll of 25 m LFT 330 330 mm Roll of 25 m Roll of 25 m LFT 240 240 mm FAT 130/3 K 30 mm (cover plate) / Bar of 3 m 180 mm adhesive part

## **APPROVALS / STANDARDS**

- MPA NRW: German Approval Certificate for the Tricoflex<sup>®</sup> membrane sealing system in construction joints under hydrostatic pressure
- MPA NRW: German Approval Certificate for the Tricoflex<sup>®</sup> membrane sealing system in expansion joints under hydrostatic pressure
- STUVAtec: German Application Certification for the Tricoflex<sup>®</sup> membrane sealing system
- MPA NRW: German Certification for use in the presence of agricultural slurry, manure and municipal wastewater
- Wissbau: Application Test of the Tricoflex<sup>®</sup> Membrane Joint Sealing System under hydrostatic pressure

Appearance / Colour	Colour: grey Shape:	
	Profile Type DFT 330/3	Profile Geometry
	-	
	DFT 330/3 KF	
	DFT 330/3 KI	
	DFT 330/3 KA	
	LFT 330	I
	LFT 240	<u>_</u>
	FAT 130/3 K	
Shelf Life	Product does not expire if correctly stored.	
Storage Conditions	Rolls must be stored in a cool, dry place, away from sunlight, rain, snow, ice and any possible sources of damage and / or contamination.	
TECHNICAL INFORMATION		
Elongation	> 400 %	DIN 53504
SYSTEM INFORMATION		
System Structure	The Tricoflex <sup>®</sup> Joint Sealing System is based on: • Tricoflex <sup>®</sup> Sealing Strips • Tricoflex <sup>®</sup> Sealing Profiles • Tricoflex <sup>®</sup> System Epoxy Adhesive Sikadur <sup>®</sup> -31 CF Normal	

## **BASIS OF PRODUCT DATA**

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

## IMPORTANT CONSIDERATIONS

Note:

- The Tricoflex Joint Sealing System should only applied by Sika trained Specialists.
- All Informations of the Tricoflex Method Statement have to be observed.

## ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.

## **APPLICATION INSTRUCTIONS**

All of the data relevant to the design and installation of the Tricoflex<sup>®</sup> membrane sealing profiles can be found in the Tricoflex<sup>®</sup> sealing system installation procedures and Method Statements.

For design, installation and limitations of all cast-in profile sections, the German Standard DIN V 18197 have to be comply.

The installation conditions required and their limitations are primarily determined by the system adhesive – Sikadur®-31 CF Normal. Detailed information on this is provided on the respective Sikadur®-31 CF Normal Product Data Sheet.

#### SUBSTRATE QUALITY

The substrate must be structurally sound, with a mechanically prepared, cement laitence free, open-textured surface that is clean, and free from any possible contaminants or standing water.

After suitable mechanical preparation (e.g. by blast cleaning) the substrate must have a minimum pull-off strength of 1.2 N/mm<sup>2</sup>.

For effective watertight sealing the rest of the substrate / surface area must also be impermeable to water ingress, otherwise the Tricoflex® Membrane Joint Sealing System must be combined and integrated with a suitable surface sealing solution. (please refer to Sika Technical Services Department for specific advice and suitable solutions for your project)

Before bonding the system on substrates other than concrete, it's suitability should be confirmed by testing / trial applications.

#### **APPLICATION METHOD / TOOLS**

Detailed information on application can be found in

the Tricoflex<sup>®</sup> system installation procedure and Method Statement.

#### Welding

Preformed pieces and waterstopping system and part systems must be factory produced.

Joints formed on site must only be welded butt joints. Butt joints should only welded with a special welding Machine.

#### Butt jointing:

1. Cut the ends of the profile to the right angle and length, including an extra length allowance of about 1 cm per joint.

2. Fix the profile to the welding machine using the clamping rails fitted correctly. The ends of the profile must be installed with about 1 cm projecting on the welding mirror side.

3. Move the ends of the profile together using the lever at the side, check their position is congruent for fixing and readjust if necessary.

4. Take the welding rod, heated to 300–320 °C, to the welding position.

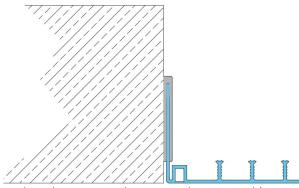

5. Fuse the profile ends on the welding rod under slight pressure, using the lever at the side.

6. As soon as the profile ends are fully fused, move the welding rod down and bring the ends together under slight pressure.

7. The welded joint must cool free from exposure and stress for at least 10 minutes.

Remove the projecting welding bead with a blade and check the sealing and therefore watertightness of the joint with a spark tester.

#### Bonding the adhesive Profiles:

1. The substrate must be prepared as required (see above).

2. Press the specified bond section of the sealing profile fully into the base coat of Tricoflex<sup>®</sup> system adhesive. Additional temporary mechanical support with perforated fixing plates are necessary for bonding the profiles.

3. The membrane profile is then also given a top cover coat of the adhesive in the bond section, to prevent it

**BUILDING TRUST**

being peeled away from the base.

Dependent on the installation and the exposure / load situation, an additional support or protection structure may be necessary. A detailed description of this requirement and the possibilities is given in the Tricoflex<sup>®</sup> membrane sealing system description and Method Statements.

#### **Preparations for concreting**

The Tricoflex <sup>®</sup> membrane sealing profile should be installed securely in position and according to the project specifications. Dependent on the installation situation, a maximum spacing distance of  $\leq 25$  cm is generally recommended for the fixing points. External waterstops should not be installed with stop anchors facing downwards.

Before concrete placement the Tricoflex <sup>®</sup> membrane sealing profile should be clean and free of any dirt or possible contaminants, and checked for any possible damage. When placing and compacting the concrete, make sure that the profile is fully embedded in the concrete matrix without voids.

For detailed descriptions look at the Method Statements and DIN V 18197.

Dependent on the type of installation and loading / traffic situation, an additional support or protection system / build-up may be necessary.

#### LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

### **LEGAL NOTES**

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our
